

Codly FinOps Platform

Standard vs Advanced — Capability Overview

What is Codly FinOps?

Codly FinOps is a cloud cost management platform that gives your organisation complete visibility into Azure spending — across all subscriptions, services, and resource types — through a single, unified dashboard. It provides real-time cost breakdowns, historical trends, anomaly alerts, budget tracking, and on-demand reports, all without requiring manual data exports or engineering effort.

Standard vs Advanced

Codly FinOps is available in two tiers. **Standard** connects directly to Azure's cost APIs and covers all core FinOps needs — service breakdowns, resource-level costs, forecasting, anomaly detection, and optimization recommendations. **Advanced** goes further: it maintains a dedicated analytics layer on top of your billing data, unlocking full historical access, three distinct billing views, tag-based chargeback, and scheduled exports — all at consistently fast response times regardless of how large your Azure footprint is.

Three billing views — Codly Advanced

Advanced provides three perspectives on the same cost data, each designed for a different audience:

Amortized	Focus	Actual
For Finance & CFOs. Reservation costs spread evenly across the year — no spike in the month of purchase.	For FinOps teams. The new industry-standard billing format — makes cross-cloud cost comparison straightforward.	For Accounting & Audit. Raw charges exactly as they appear on the Azure invoice.

What you get with Codly FinOps

Regardless of tier, Codly provides a unified dashboard covering your full Azure spend with no manual data pulls required. Standard users get real-time cost visibility and actionable recommendations from Azure's own advisory engine. Advanced users additionally receive full billing history from day one, tag-based allocation and chargeback reports, all three billing views in a single interface, and on-demand exports as PDF, Excel, or CSV — all updated automatically every day.

Feature Comparison — Standard vs Advanced

A complete breakdown of what each Codly FinOps tier includes

Feature	Standard	Advanced	Remark
Cost Visibility			
Service-level cost breakdown	Yes	Yes	Costs grouped by Azure service (VMs, Storage, Networking, etc.)
Resource-level cost breakdown	Yes	Yes	Drill down to individual VMs, databases, and storage accounts
Subscription-level breakdown	Yes	Yes	View and compare spend across multiple subscriptions
Usage-type breakdown	Yes	Yes	Split costs by what you consumed — compute hours, storage GB, etc.
Custom date range queries	Yes	Yes	Pull cost data for any time window you choose
Last N months snapshot	Yes	Yes	Quick multi-month summary view
Full billing history (12+ months)	—	Yes	Advanced retains all historical data — Standard is limited by API history windows
Day-by-day cost trend	Yes	Yes	See daily spend movement to catch unexpected jumps early
Billing Views			
Standard cost view	Yes	Yes	Default view — actual charges as billed by Azure
Amortized view	—	Yes	Spreads reservation costs evenly across the year — no single-month billing spike
Focus view	—	Yes	New industry-standard billing format — simplifies multi-cloud cost comparison
All three views side by side	—	Yes	Compare Amortized, Focus, and Actual in one report
Tag-Based Allocation			
Filter costs by tag	Yes	Yes	Narrow down spend by labels applied to your resources
Cost breakdown by any tag dimension	—	Yes	Group by team, project, environment, application — any tag you use
Chargeback / showback by tag	—	Yes	Each team or department sees exactly what they spent — ready for internal billing
Reserved Instances (RI)			
RI utilization report	Yes	Yes	See how much of your reserved capacity is actually being used
Amortized RI cost per month	—	Yes	Monthly view with reservation cost spread evenly — easier for budgeting
Actual RI charge (invoice-matched)	—	Yes	Exact figure matching your Azure invoice — useful for audit and reconciliation
RI savings vs pay-as-you-go	—	Yes	Shows how much you saved by reserving versus paying the hourly rate
Reports & Exports			
Cost breakdown report	Yes	Yes	On-demand report covering spend by any dimension

Feature	Standard	Advanced	Remark
Export as CSV / Excel	—	Yes	Download cost data for offline analysis or sharing with finance teams
Export as PDF	—	Yes	Formatted, ready-to-share report for stakeholders
Automated weekly report	—	Yes	Report generated and delivered automatically every week — no manual action needed
Anomaly detection	Yes	Yes	Alerts when spending deviates from expected patterns
Cost forecast	Yes	Yes	Projected spend based on current usage trends
Optimization recommendations	Yes	—	Actionable suggestions to reduce waste — Standard only, sourced from Azure Advisor
Platform & Scale			
Real-time resource data	Yes	—	Live resource metadata — Standard only
No query rate limits	—	Yes	Advanced has no throttling — Standard can hit Azure API limits under heavy load
Multiple users, no slowdown	—	Yes	Advanced handles concurrent users running reports at the same time
Consistent speed at scale	—	Yes	Performance stays the same whether you have 10 or 1,000 subscriptions
Automatic configuration on connect	—	Yes	Advanced detects your data structure and configures itself — no manual setup
Secure credential management	—	Yes	Access credentials stored in Azure Key Vault — not in plain text

"Yes" in Standard means the feature is available in the core Codly FinOps tier. "Yes" in Advanced means it is available in the enterprise tier. Features marked Advanced-only deliver capabilities that go beyond what Azure's standard APIs provide.
