

Modernizing FinOps with Azure Synapse

A capability overview of Codly's Synapse-backed FinOps platform vs. the traditional Azure REST API approach

What is Azure Synapse in this context?

Azure Synapse Analytics is an enterprise-grade analytics service that allows organisations to query large volumes of cloud billing data instantly — without the delays and limitations of traditional API-based access. Codly's FinOps platform is built on top of Azure Synapse, giving your team real-time access to complete, accurate cost data across all your Azure resources and subscriptions.

Why this matters

Traditional FinOps tools fetch cost data on demand from Azure APIs every time a report or dashboard is requested. This creates slow load times, incomplete data under high usage, and hard limits on how much history can be retrieved. Codly's Synapse integration eliminates these constraints entirely: dashboards load in seconds, reports cover your full billing history, and performance stays consistent regardless of how many users, subscriptions, or resources you have.

Three cost views — new in Codly v4

Codly v4 introduces three distinct billing perspectives, each tailored to a different stakeholder:

Amortized	Focus (default)	Actual
For Finance & CFOs. Reserved Instance costs spread evenly — no purchase-month spike.	For FinOps teams. Microsoft FOCUS standard view for day-to-day reporting and budget reconciliation.	For Accounting & Audit. Raw charges exactly as they appear on the invoice.

What does it cost?

Codly's Synapse-backed FinOps is priced on a **pay-per-use model** — there are no fixed compute charges and no costs when the platform is idle. Billing is based on the volume of cost data analysed, typically amounting to well under **\$1 per month** for a standard Azure environment. There is no reserved capacity to pre-purchase and no licensing overhead.

What you get with Codly FinOps

Codly provides a unified FinOps dashboard covering your full Azure spend — across all subscriptions, services, and resource types — with no manual data pulls required. Your team gets instant access to cost breakdowns by service, resource, or tag; historical trends going back as far as your billing data exists; anomaly alerts; and on-demand reports exportable as PDF, Excel, or CSV. All three billing views — Amortized, Focus, and Actual — are available from a single interface, updated automatically every day.

Feature Comparison — Azure REST API vs Synapse

Features available through the standard Azure REST API approach vs. Codly's Synapse-backed platform

Feature	Azure REST API	Synapse (Codly)	Note
Cost Visibility			
Service-level cost breakdown	Yes	Yes	Both support grouping by service
Resource-level cost breakdown	Yes	Yes	Per VM, DB, storage account
Subscription-level cost breakdown	Yes	Yes	Costs grouped by subscription
Usage-type breakdown	Yes	Yes	e.g. Compute, Storage, Network hours
Custom date range queries	Yes	Yes	Any start/end date
Last N months snapshot	Yes	Yes	Multi-month historical snapshot
12+ months full billing history	—	Yes	Synapse stores all export data permanently
Day-by-day cost trend	Yes	Yes	Daily granularity available
Cost Views (Billing Type)			
Standard cost view (actual / blended)	Yes	Yes	Default in both approaches
Amortized cost view (RI spread)	—	Yes	Synapse only
Focus billing view (MOSA standard)	—	Yes	Synapse only — Microsoft FOCUS schema
Side-by-side comparison of all three views	—	Yes	Synapse only
Tag & Allocation			
Filter costs by tag key / value	Yes	Yes	Both support basic tag filtering
Full tag-based cost extraction	—	Yes	Synapse only
Cost grouped by any tag dimension	—	Yes	Team, environment, project, app
Chargeback / showback report by tag	—	Yes	Synapse only — tag-based allocation
Reserved Instances			
RI utilization metrics	Yes	Yes	Available in both
RI cost amortized per month	—	Yes	Synapse only — amortized view
Actual RI purchase charge (invoice-match)	—	Yes	Synapse only — actual view
RI savings vs pay-as-you-go comparison	—	Yes	Synapse only
Reporting & Export			
Cost breakdown report	Yes	Yes	Available in both
Export as CSV / Excel	—	Yes	Synapse only

Feature	Azure REST API	Synapse (Codly)	Note
Export as PDF report	—	Yes	Synapse only
Automated weekly cost report	—	Yes	Synapse only
Anomaly detection	Yes	Yes	Available in both
Cost forecast	Yes	Yes	Available in both
Optimization recommendations	Yes	—	API only — Azure Advisor
Platform & Reliability			
Real-time resource data (current state)	Yes	—	API only — live resource metadata
No rate-limit risk on queries	—	Yes	Synapse only
Concurrent dashboard queries without slowdown	—	Yes	Synapse handles parallel queries
Consistent speed with 100+ subscriptions	—	Yes	API degrades; Synapse stays constant
Auto schema discovery on connect	—	Yes	Synapse v4
Credential storage via Azure Key Vault	—	Yes	Synapse v4

"Yes" in the Azure REST API column means the capability is available via the standard Azure Cost Management API. "Yes" in the Synapse column means it is delivered through Codly's Synapse-backed platform with no API calls at query time. Optimization Recommendations remains API-sourced as it relies on Azure Advisor's live analysis engine.
